

CEMEX ready to use plaster – Data Sheet

Introduction

CEMEX ready to use plaster is a ready to use alternative to site mixing of plaster. CEMEX ready to use plaster is factory produced using materials conforming to relevant local and international standards, consisting of a blend of specially selected cements, fine aggregate and admixtures (and pigments where required) to produce a mix with superior characteristics.

Grade

CEMEX ready to use plaster as supplied complies with requirements for mix proportions of a Designation iii rendering plaster to EN998 -1: 'Specification for mortar for masonry – Part 1: Rendering and ready to use plastering mortar'

Different designation mortars can be supplied for special cases – please contact your local sales representative for more information.

Aggregates Size

CEMEX ready to use plaster has a maximum nominal particle size of 5mm

Plastic Density

The typical plastic density of CEMEX ready to use plaster will be in the range 1700 - 1850 kg/m³.

Durability

If proper attention has been given to external details in designing the structure and the materials and methods of application are in accordance with the recommendations of best practice, external rendered finishes should not require any maintenance over a long period of years

Workability

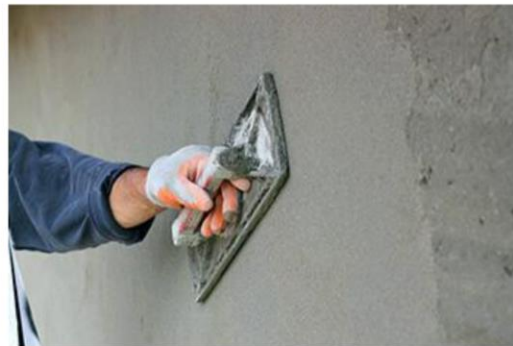

CEMEX ready to use Plaster is supplied at a workability suitable for direct hand application to walls. CEMEX ready to use Plaster is designed to remain usable for up to 12 hours from the point of delivery. Working time may be reduced slightly by very high weather conditions.

Engineering Properties

Due to the factory produced nature of CEMEX ready to use plaster, the finished plaster will have much less variation than a conventional site mixed plaster.

Supply

CEMEX ready to use plaster is delivered into 200 or 250 litres tubs, which can be distributed to the point of application on site.
